

ALAA GHARAIBEH

FULL STACK DEVELOPER

Irbid, Jordan | 3ala2mohammedgh@gmail.com | +962 779230975 | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

Professional Summary

Full Stack Developer with experience in **NestJS, React, TypeScript, ASP.NET Core, Angular, and SQL databases**. Currently working at **opsHeaven Technologies**, developing scalable web applications and business-focused software solutions. Experienced in AI automation, backend API development, frontend interfaces, and database-driven systems. Passionate about clean architecture, problem-solving, and building efficient, user-centered applications.

EXPERIENCE

Full Stack Developer OpsHeaven Technologies

- Trained in full-stack development using React, TypeScript, NestJS, Prisma, and PostgreSQL.
- Built RequestHub, a request management platform for client request submission, tracking, team workflow management, and internal communication.
- Implemented JWT authentication, role-based permissions, Socket.IO real-time notifications, file uploads, audit logs, and email-based workflows.
- Developed admin dashboards, request filtering, pagination, drag-and-drop status management, AI-generated summaries, and PDF reports.

Full Stack Developer Trainee Ministry of Higher Education and Scientific Research

- Trained on ASP.NET / .NET framework and SQL Server within the Unified Admissions System.
- Worked on student information systems, handling admissions and academic data.
- Designed and executed SQL queries, stored procedures, and data validation for student records.
- Participated in system maintenance, bug fixing, and feature enhancements.
- Applied software engineering best practices and worked with real production-level data structures.
- Gained experience in government-scale systems and structured development workflows.

AI Automation Intern (n8n Workflow Automation) Robotna

- Built and automated workflows using n8n to streamline business processes.
- Integrated APIs and automated repetitive tasks using low-code automation techniques.
- Collaborated with the technical team to design, test, and deploy AI-powered automation solutions.
- Gained hands-on experience in workflow orchestration, triggers, and data handling.

EDUCATION

Software Engineering

Jordan University of Science & Technology

GPA: 3.42/4 (Very Good) Honored Student

SKILLS

- **Backend Development:** Hands-on experience with **ASP.NET Core** and **NestJS**, building RESTful APIs, using **Entity Framework Core** and **Prisma** for database operations, implementing JWT authentication, role-based access control, file uploads, email workflows, and API integrations.
- **Frontend Development:** Experience with **Angular**, **React**, **Vite**, **TypeScript**, and **Tailwind CSS**, using component-based architecture, Angular services, reactive forms, React Query, routing, state management, responsive design, and UI/UX improvements.
- **Programming Languages:** Working knowledge of **TypeScript**, **JavaScript**, **C#**, **Java**, **C++**, **HTML**, and **CSS**.
- **Database:** Familiar with **SQL Server** and **PostgreSQL**, including schema design, migrations, seeding, stored procedures, triggers, indexing, and relational database operations.
- **DevOps & Tools:** Basic experience with **Docker**, **Git**, **GitHub**, **Jira**, **Postman**, **Cloudinary**, and environment-based configuration.
- **Problem Solving:** Solved over **100 problems** on coding platforms, developing strong analytical and debugging skills.
- **Version Control:** Experience with **Git** and **GitHub** for code collaboration, branching, and version management.
- **Communication:** Good verbal and written communication skills with the ability to collaborate effectively in team environments.
- **Networking:** Completed CCNA: Introduction to Networks through Cisco Networking Academy, covering network fundamentals, IP addressing, and basic routing/switching concepts.

PROJECTS

RequestHub — Full-Stack Request Management System

Technologies: React, TypeScript, Vite, Tailwind CSS, React Query, Socket.IO, NestJS, Prisma, PostgreSQL, JWT, Nodemailer, OpenAI API, PDFKit, Docker

- Built a full-stack **permission-based request management system** that allows clients to submit service requests, upload attachments, and track request progress.
- Developed dynamic **role and permission management** for admins, clients, team members, and management users.
- Created backend APIs using **NestJS** and **Prisma** for users, clients, teams, roles, permissions, requests, notifications, audit logs, and request lifecycle workflows.
- Implemented **JWT authentication**, protected routes, refresh tokens, password reset, and first-login password change.
- Built admin and team dashboards with request filtering, pagination, drag-and-drop workflow updates, and real-time status notifications.
- Added request workflow features including status transitions, team assignments, notes, mentions, reminders, and request history tracking.
- Integrated email notifications using **Nodemailer** and AI-powered summaries using the **OpenAI API**.
- Generated PDF reports for completed requests and daily activity reports using **PDFKit**.

Fitness Web Application (WellnessCore Graduation Project)

- Implemented JWT authentication and role-based authorization, defining access rules for Admin, Trainee, Therapist, and User roles.
- Built a community Q&A feature where all users can post questions, and only trainees and therapists can respond with expert answers.
- Developed admin functionalities, including:
 - Assigning and updating user roles
 - Deleting inappropriate questions or answers
 - Managing user access and content
- Integrated a chatbot using OpenAI API to act as a personal fitness assistant and coach for users.
- Implemented a food image analyzer that identifies meals and calculates calories and protein using AI based image processing.
- Designed the overall system structure and frontend UI, including dashboards, navigation, and user flows.
- Managed media uploads through Cloudinary and stored application data using Supabase.
- GitHub: <https://github.com/husamfares/WellnessCore>

Social Media App (Full Stack ASP.NET Core & Angular)

- Developed as part of a structured Udemy course with full-stack implementation
- Backend: ASP.NET Core with JWT authentication, role-based access, and image upload
- Real-time Features:
 - Real-time messaging using SignalR
 - Instant notifications for new messages
 - Online/offline user status tracking
 - Ability to add and like other users
 - Match-style interaction and connection features
- Frontend: Angular modules for login, messaging, profile management, and user browsing
- GitHub: <https://github.com/3ala2gh/DatingApp>
