

ALAA GHARAIBEH

Full Stack Developer

Amman, Jordan | 3ala2mohammedgh@gmail.com | +962 779230975 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Full Stack Developer with one year of professional experience building scalable web applications using React, TypeScript, NestJS, ASP.NET Core, Angular, and PostgreSQL. Experienced in RESTful API design, JWT authentication, role-based access control, real-time features with Socket.IO and SignalR, and AI integrations using the OpenAI API. Currently contributing to production-grade software at OpsHeaven Technologies, with additional background in government-scale systems and n8n workflow automation.

EDUCATION

B.Sc. Software Engineering - Jordan University of Science and Technology | GPA: 3.42 / 4.0 (Very Good, Honored Student) **SKILLS**

& Abilities

Backend: NestJS, ASP.NET Core, Node.js, Express, next.js, Prisma, Entity Framework Core, REST APIs, JWT, RBAC, Socket.IO, SignalR, Nodemailer

Frontend: React, Angular, TypeScript, Vite, Tailwind CSS, React Query, Reactive Forms, State Management, Responsive Design

Languages: TypeScript, JavaScript, C#, Java, C++, HTML, CSS

Databases: PostgreSQL, SQL Server - schema design, migrations, stored procedures, indexing, triggers

DevOps & Tools: Docker, Git, GitHub, Postman, Cloudinary, Jira, Supabase

Other: OpenAI API integration, PDFKit, n8n workflow automation, CCNA networking fundamentals

EXPERIENCE

Full Stack Developer — OpsHeaven Technologies | 2026 - Present

Developed RequestHub, a full-stack request management platform using React, TypeScript, NestJS, Prisma, and PostgreSQL. Built JWT authentication with refresh tokens, role-based permissions, Socket.IO real-time notifications, file uploads, audit logs, and email-based workflows via Nodemailer. Implemented admin and team dashboards featuring request filtering, pagination, drag-and-drop status management, AI-generated summaries via OpenAI API, and automated PDF reports with PDFKit.

Full Stack Developer Trainee — Ministry of Higher Education and Scientific Research | 2025

Gained hands-on experience with ASP.NET Core, .NET framework, and SQL Server within the national Unified Admissions System. Worked on student information systems handling admissions and academic records, writing optimized SQL queries, stored procedures, and data validation routines. Applied software engineering best practices in a structured, government-scale production environment.

AI Automation Intern (n8n) — Robotna | 2025

Designed and deployed business process automation workflows using n8n, integrating third-party APIs to eliminate repetitive tasks. Collaborated with the technical team on workflow orchestration, trigger logic, and data handling to deliver AI-powered automation solutions in a low-code environment.

KEY PROJECTS

RequestHub — Full-Stack Request Management System (OpsHeaven Company)

React | TypeScript | NestJS | Prisma | PostgreSQL

Built a permission-based request management platform with dynamic role and permission management for admins, clients, team members, and managers. Features include JWT authentication with refresh tokens and password reset, drag-and-drop workflow management, realtime notifications, AI-generated request summaries, and automated PDF report generation.

WellnessCore — Fitness Web Application (Graduation Project) *ASP.NET*

Core | Angular | Supabase

Designed and implemented a role-based fitness platform with JWT authentication supporting Admin, Trainee, Therapist, and User roles. Built a community Q&A system, an AI-powered fitness chatbot using OpenAI API, and a food image analyzer that identifies meals and estimates nutritional content. Managed media via Cloudinary and data persistence via Supabase.

AVO-Perfume — Full-Stack E-commerce Website

React | NestJS | Supabase | Cloudinary

AVO Perfume is a full-stack perfume e-commerce website with an admin dashboard for managing products, categories, and offers. To solve free backend hosting cold-start delays, I implemented a build-time static data caching system. During frontend deployment, a custom script fetches the latest data from the backend API and stores it as JSON files inside the frontend. The public website then reads from these static JSON files, making the store fast and available even when the backend server is sleeping. I also added an admin “Publish Website” button that triggers the refresh and redeployment process, allowing admins to publish updated products and offers to the live website.

Dating App — Full Stack Project

ASP.NET Core | Angular

- Developed user authentication, profiles, and real-time messaging features.
